

eBusiness Application Development

Solutions for ebusiness.

Companies today must have more than just a web presence to flourish. The business dynamics of the new century dictate that companies fully integrate the web into their business model. For both eBusiness startups and traditional enterprises moving into a click-and-mortar world, time to market is a critical success factor. Developing the internal systems to integrate your web strategy into your core business applications will be the key to establishing market leadership in the new economy.

Perhaps even more important for today's enterprises, the technology spawned by the internet now allows companies to build their mission-critical, internal applications using a browser as the user interface and multi-tier architecture to produce more robust, more reliable, and more easily maintained applications. This new generation of technology enables businesses to integrate their customers, partners and suppliers into the business process. Those organizations that deploy these leading edge applications will prosper through improved efficiencies, tightly integrated information chains, and enhanced customer relationships.

Fast changing market conditions can make the cost of developing and managing in-house expertise prohibitive. Annams can help you solve this issue by providing the right resources at the right time to rapidly execute your web strategy. With our knowledge and experience building solutions centered on data and the Internet, Annams can help meet your time sensitive project objectives.

Annams Specialties:

- Systems Architecture and Design
- Requirements Analysis and Functional Specifications
- Enterprise Data Modeling
- Full Lifecycle Application Development
- eBusiness Strategy Studies
- Scalability Analysis
