

## Oracle 9i Database

*Simply, today's finest database.*

Annams is proud to offer Oracle's newest database, 9i.

Oracle is about to change the way you think about the technology that runs your business. With Oracle9i, you'll be able to grow your business, increase efficiency and innovate faster than ever before. You'll find that Oracle9i meets and exceeds your most stringent demands for high quality of service. Oracle 9i Database is available in two editions, each suitable for different development and deployment scenarios. Several additional optional database products that enhance the capabilities of Oracle 9i Database for specific application requirements is also available from Annams. As a Preferred Oracle Partner, Annams also provides a complete installation and/or upgrade of 9i in a single day and at a very reasonable price.

Here's just a brief preview of the benefits that Oracle9i can bring to your enterprise:

- Unlimited scalability with a minimum of unused computing capacity. Are you paying for computing capacity that you won't use for 12-18 months? With Oracle9i Real Application Clusters, you can start small and then grow to handle huge computing capacity without changing your applications or taking your business off-line.
- Increase IT staff productivity. Oracle has simplified the process of managing your database, thereby improving operational efficiency. By automating or removing many time consuming and repetitive tasks, Oracle9i will improve DBA productivity as well as reducing traditional costs associated with keeping your Oracle solutions up and running at full speed.
- Complete protection of your information assets. Is your data center ready for any type of disaster or failure? Oracle9i Data Guard provides complete data protection against any disaster, failure or human error.
- Finding hidden intelligence in your own files. Oracle9i features the updated Oracle9i Internet File System. If your documents, spreadsheets, presentations and HTML documents are not managed by Oracle, you may be wasting disk space, using the wrong versions or have no safety net for your critical files. Files stored in the Oracle9i Database are just smarter and more valuable.

The following are the two editions of Oracle 9i Database:

### - Oracle 9i Standard Edition

The Standard Edition delivers unprecedented ease-of-use, power, and price/performance for workgroup, department-level, and internet/intranet applications. Oracle9i Standard Edition includes a fully integrated set of easy-to-use management tools, full distributed, replication, and web features. From single-server environments, Oracle 9i Standard Edition includes all the facilities necessary to build business-critical applications.

### - Oracle 9i Enterprise Edition

The Enterprise Edition database provides efficient, reliable, secure data management for high-end applications such as high volume on-line transaction processing (OLTP) environments, query-intensive data warehouses, and demanding Internet applications. Oracle 9i Enterprise Edition provides the tools and functionality to meet the availability and scalability requirements of today's mission-critical applications for the enterprise.
